

Intel® Desktop Board DZ87KLT-75K Integration Guide

This guide contains basic instructions for installing the desktop board in a compatible chassis. For a complete description of the board and its features, refer to the Technical Product Specification at: <http://www.intel.com/products/motherboard>.

The layout of your board may differ slightly from that shown.

89977-002

3 Install a Processor

For a list of processors this board supports, go to: <http://processormatch.intel.com>.

LGA1150 Processor Socket

A. Unlatch the Socket Lever

Push the lever down and away from the socket to release it.

B. Open the Load Plate

Rotate the socket lever to lift the load plate away from the socket.

Make sure the load plate is in the fully open position.

When opening the socket, DO NOT TOUCH the gold socket contacts.

When unpacking a processor, hold by the edges only to avoid touching the gold contacts.

C. Install the Processor

The processor must align correctly with the socket before installation. DO NOT DROP the processor into the socket.

- Hold the processor with your thumb and index finger as shown to align your fingers with the socket cutouts.
- Make sure that the processor Pin 1 indicator (gold triangle) is aligned with the Pin 1 chamfer on the socket.
- Make sure that the notches on the processor align with the posts on the socket.
- Lower the processor straight down without tilting or sliding it in the socket.

D. Close the Load Plate and Secure the Socket Lever

- Carefully lower the load plate and make sure it slides under the shoulder screw cap as the lever is lowered.
- Continue to lower the lever and the socket cover will pop off.
- Latch the socket lever under the load plate tab.
- Pick up the socket cover and remove it from the board.

4 Install a Heatsink

NOTE: Heatsinks that come with boxed Intel® processors use pre-applied thermal interface material (TIM) and do not need thermal grease. If you install a different heatsink, refer to the manufacturer's instructions.

Do not touch or disturb the TIM on the heatsink during installation.

Place the heatsink onto the processor socket. Ensure that the fan power cable is on the side closest to the processor fan header.

Align the four fasteners with the corresponding board holes. Ensure that the fastener slots are pointing perpendicular to the heatsink.

While pressing down on the heatsink, press down on the top of the fasteners with your thumb to lock into place. Ensure that all four fasteners are secured.

Connect the heatsink fan power cable to the processor fan header.

7 Connect Chassis Front Panel Cables

Make the front panel connections as shown in the diagram below.

NOTE: This desktop board provides two options for connecting the front panel power LED; only make one connection.

Alternate Front Panel Power LED Header

Your chassis cables may vary in appearance and labeling depending upon the chassis model.

Before You Begin

Follow these guidelines before you begin building your system:

- Electrostatic discharge (ESD) can damage components. Perform the procedures described in this guide only at an ESD workstation using an antistatic wrist strap and a conductive foam pad. If such a station is not available, you can provide some ESD protection by wearing an antistatic wrist strap and attaching it to a metal part of the computer chassis.
- Always follow the steps in each procedure in the listed order.
- Set up a log to record information about your computer such as serial numbers, installed options, and BIOS configuration.

Installation Precautions

When you install the desktop board, observe all warnings and cautions in this guide. To avoid injury, be careful of:

- Sharp pins on headers and connectors
- Rough edges and sharp corners on the chassis
- Damage to wires that could cause a short circuit

Observe Safety and Regulatory Requirements

Read and follow the instructions in this guide and the instructions supplied with the chassis and associated devices. If you do not follow these instructions and the instructions provided by the chassis and device suppliers, you increase your safety risk and possibility of noncompliance with regional laws and regulations.

1 Install the I/O Shield

Place the I/O shield inside the chassis and press it into place so that it fits tightly and securely. Use caution so you do not deform the I/O shield.

Reference chassis shown, your chassis may differ.

2 Install the Desktop Board

A. Install Standoffs

Ten standoffs should be installed into the chassis before installing the desktop board. Locate the threaded standoff holes that match the desktop board, and install a standoff at each location indicated by the RED circles.

NOTE: Some chassis may have one or more standoffs pre-installed. Be sure that only the ten necessary standoffs are installed prior to installing the desktop board.

B. Install the Desktop Board

Install the desktop board by aligning the back panel with the I/O shield and securing the board to the standoffs using the screws provided with your chassis.

5 Install System Memory

NOTE: This desktop board supports 240-pin DDR3 DIMMs only.

For a list of tested memory go to: <http://www.intel.com/support/go/buildit>.

Minimum memory: 1 GB 1333 MHz DDR3 DIMM. Memory should be installed in DIMM number order:

- For single-channel operation, populate Slot 1 or Slots 1 and 3.
- For dual-channel operation, populate Slot 1 and Slot 2 or Slots 1, 2, 3, and 4.

For best performance, DIMM pairs should be identical in size, speed, and organization.

Do not touch the gold contacts when handling or installing DIMMs.

6 Connect Chassis Fans

This desktop board has five fan headers for connecting chassis fans. See the details below for connecting either a 3-wire or a 4-wire fan to the desktop board fan headers.

NOTE: The pin numbering for the fan connectors is shown for ease of installation.

8 Install a PCI Express* Mini Card (Optional)

This step shows how to install both a PCI Express Half-Mini Card and a PCI Express Full-Mini Card, choose the installation that matches your configuration.

Full-Mini Card Position

PCI Express Half-Mini Card Installation

- Remove the screw and the standoff from the Full-Mini Card position.
- Install the standoff into the Half-Mini Card position.
- Align the notch in the card with the socket key and insert the card at a slightly upward angle as shown.
- Push down on the card and secure with a screw.

PCI Express Full-Mini Card Installation

- Verify that the standoff is in the correct location and remove the screw.
- Align the notch in the card with the socket key and insert the card at a slightly upward angle as shown.
- Push down on the card and secure with a screw.

9 Install a PCI Express x16 Graphics Card (Optional)

A. Install a PCI Express x16 Graphics Card

B. Install and Link a Second PCI Express x16 Graphics Card

C. Remove a PCI Express x16 Graphics Card

11 Make Power Connections

- A** Connect the 2 x 4 power supply cable to the matching 2 x 4 power connector on the board.
- B** Connect the 2 x 12 power supply cable to the matching 2 x 12 power connector on the board. Your power supply may have a 2 x 10 power cable, if so, connect as shown.
- C** Ensure that the voltage setting on the rear of the power supply is set correctly.

12 Install the WiFi/Bluetooth* Module (Optional)

- A** Remove the plastic cover from an empty 5-1/4" drive bay in the chassis bezel.
- B** Remove the metal filler plate from the internal drive bay.
- C** Remove the paper backing covering the adhesive on the back of the WiFi/Bluetooth Module and attach the module to the back side of the plastic drive bay cover.
- D** Connect one end of the USB cable to the connector on the front of the module.
- E** Reinstall the plastic drive bay cover in the chassis bezel while routing the USB cable into the chassis through the empty drive bay.
- F** Connect the free end of the USB cable to an unused front panel USB 2.0 connector on the desktop board.

13 Finishing up

10 Install and Connect SATA Devices

- A** Install your SATA devices (Hard Disk Drive, Optical Drive, etc.). See the documentation that came with your chassis or SATA device for device installation.
- B** Connect both ends of the SATA data cable, one end to an available SATA port on the desktop board and the other to the connector at the rear of the SATA device.
- C** Connect the SATA power cable from the power supply to the power connector at the rear of the SATA device. Repeat this procedure for each SATA device.

14 Software

- A** Turn on your computer and install an operating system.
- B** Insert the Intel® Express Installer DVD to install the necessary software to complete your desktop board integration. Go to: <http://downloadcenter.intel.com> to download the latest drivers.
- C** (Optional) For information on configuring your system for RAID, refer to the Intel® Rapid Storage Technology User Guide at: http://www.intel.com/p/en_US/support/highlights/chpsts/msm.

Troubleshooting

If your system fails to boot:

- Ensure that the 2 x 4 power supply cable is plugged into the 12 V (2 x 4) processor core voltage connector on the desktop board.
- Disconnect all power and remove and re-insert the processor, memory, and any add-in cards to make sure they are fully seated. Restart the system.
- Remove any non-essential hardware components, reconnect the power, and restart the system.

If your system still does not boot, go to: http://www.intel.com/p/en_US/support/, select product support for Intel® Desktop Board DZ87KLT-75K, and then select "Troubleshooting system 'no boot' issues". This web site contains extensive information to help you solve non-boot problems including a **No Boot Wizard**.

Beep Codes

When a repeating beep code is heard and your system does not boot or display video, the beeps indicate the following:

Beep Pattern	Problem
Two beeps (beep, beep [pause], beep, beep)	No video detected
Three beeps (beep, beep, beep [pause])	Memory error
High/Low beeps (high, low, high, low, high, low, high, low)	CPU thermal trip

For more information, go to: <http://www.intel.com/support/motherboards/desktop/sb/cs-010249.htm>.

Safety and Regulatory Information

Battery Warning

Risk of explosion if the battery is replaced with an incorrect type. Batteries should be recycled where possible. Disposal of used batteries must be in accordance with local environmental regulations.

FCC Declaration of Conformity

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

For questions related to the EMC performance of this product, contact: Intel Corporation, 5200 N.E. Elam Young Parkway, Hillsboro, OR 97124 1-800-628-8686.

Canadian Department of Communications Compliance Statement

This digital apparatus does not exceed the Class B limits for radio noise emissions from digital apparatus set out in the Radio Interference Regulations of the Canadian Department of Communications.

Le présent appareil numérique n'émet pas de bruits radioélectriques dépassant les limites applicables aux appareils numériques de la classe B prescrites dans le Règlement sur le brouillage radioélectrique édicté par le ministère des Communications du Canada.

Japan VCCI Statement

この装置は、情報処理装置等電波障害自主規制協議会（VCCI）の基準に基づいたクラスB情報技術装置です。この装置は、家庭環境で使用することを目的としていますが、この装置がラジオやテレビジョン受信機に近接して使用されると、受信障害を引き起こすことがあります。取扱説明書に従って正しい取り扱いをして下さい。

Korea Class B Statement

이 기기는 가정용(B급) 전자파합격기로서 주 로 가정에서 사용하는 것을 목적으로 하며, 모든 지역에서 사용할 수 있습니다.

Korea Certification mark. Includes an adjacent KCC (Korean Communications Commission) certification number: KCC-REM-CPU-DZ87KLT-75K.

Date of manufacture: March 2013
Country of Origin: China

China RoHS Environmentally Friendly Use Period

The Environmentally Friendly Use Period (EFUP) for Intel Desktop Boards has been determined to be 10 years.

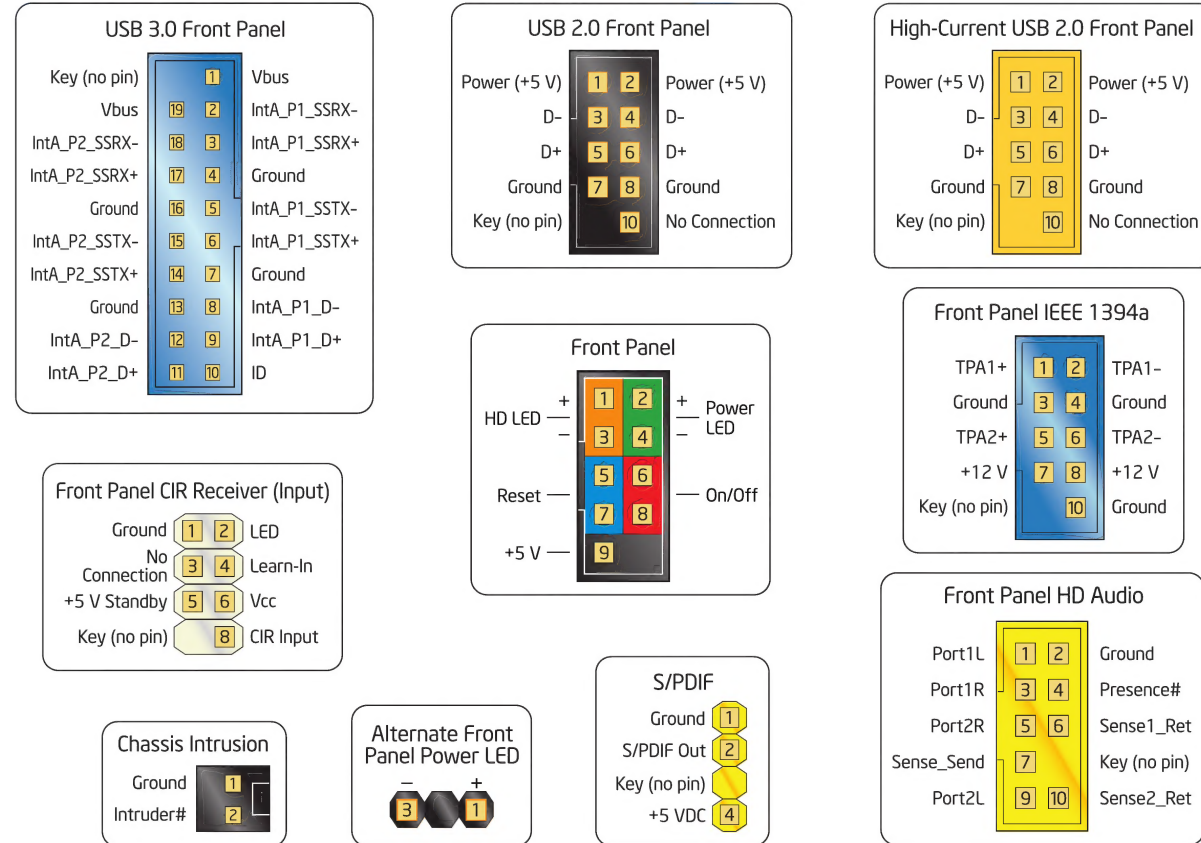

For detailed information about the desktop board's regulatory compliance, refer to the Technical Product Specification at: <http://www.intel.com/products/motherboard>.

Reference

Desktop Board Components

Header and Connector Pinouts

Back Panel Connectors

BIOS Reference

The BIOS (Basic Input/Output System) controls the computer's boot process. The purpose of the BIOS is to identify and initialize processor, memory, hard drives, optical drives, and other hardware.

BIOS Settings

For a list of BIOS settings along with their purpose and options, refer to the BIOS Glossary at: <http://www.intel.com/support/motherboards/desktop/sb/cs-020304.htm>.

Updating the BIOS

You should update the BIOS on your board only if the newer BIOS version solves a specific problem you have. BIOS updates are available in Intel's Download Center at: <http://downloadcenter.intel.com/>.

There are various methods of updating an Intel® Desktop Board BIOS to the latest version. The number of methods available for any particular board model varies, depending on drive support and BIOS update file size. For update instructions, go to: <http://www.intel.com/support/motherboards/desktop/sb/CS-022312.htm>.

Troubleshooting the BIOS

For tips on troubleshooting BIOS issues on Intel® Desktop Boards, refer to: <http://www.intel.com/support/motherboards/desktop/sb/CS-028780.htm>.

BIOS Security Jumper Settings:

1-2	Normal
2-3	Lockdown
No jumper	Configuration
